

The graph displays two data series over time from October 2020 to June 2021. The x-axis represents months, and the y-axis represents a numerical value ranging from 0 to 10. The 'raw data' series (blue line) shows a period of zero activity from October 2020 to early January 2021, followed by a gradual increase with some fluctuations, reaching approximately 4 by late April. A vertical green line marks the 'Start of family physicians receiving Covid vaccines' in early April. Following this event, the raw data exhibits extreme volatility, with several sharp peaks reaching values between 6 and 10, and corresponding deep troughs near zero, continuing through June 2021.
